16 POSITION ROTARY SELECTOR SWITCH, NOT LIGHTED, TYPE A-26A

Dynalec Part Number	702019-366
National Stock Number	5930-00-296-6041
Military Part Number	A-26A
Symbol	2788
Design Specification	MIL-T-24362

FEATURES

- Watertight 16-position rotary switch, equipped with a case-mounted sound powered telephone jack.
- Internal switch contacts are silver plated for long life and good conductivity.
- This unit allows an operator to participate in the conversation on any one of up to 16 separate circuits.
- The dial on the rotary selector is not backlit. See item 702000-903 for a similar device with a backlit dial.

Product Dimensions: 7.76" H x 6.32" W x 6.12" D

Item Weight: 7 lbs

ABSTRACT

Rotary switches are used to connect to any one of up to 30 different Sound Powered Telephone circuits, allowing operators at key shipboard locations to monitor and participate in conversations taking place almost anywhere on the ship. The Sound Powered Telephone jack built into the case of every rotary switch allows the user to connect a handset or headset / chestset to any one of the circuits present at the switch. Options include the number of separate circuits supported (up to a maximum of 30), lighted or unlighted dials (lighted dials require a separate power ship's power input), and the number of wafers (decks) in the switch - each wafer represents an additional signal wire that is switched when the rotary dial is turned.

CHARACTERISTICS

ENVIRONMENTAL

Shock	MIL-S-901C
Watertight	MIL-STD-108
Vibration	MIL-STD-167
